

PLUG

Application

The male plugs Art. **213** are used in large quantity in the hydronic distribution of cold and hot water. The main use is on brass and stainless stell manifold barrels that are female threaded to close one head.

This series of plugs is equipped with O-ring seal that permits, in the main part of the applications, to avoid addition of sealant materials as hemp or PTFE.

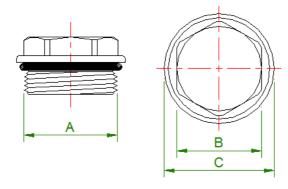

The chrome plating treatment permits to preserve the brass alloy by corrosion phenomena in the ordinary applications.
