

BRACKETS FOR MODULAR MANIFOLDS

Application

The brackets Art. **221TGK** have been especially developed to wall mounting installation of the modular manifolds series. Easy to use, it permits to securely fix the manifold preventing rotation or scrolling.

The blocking of the manifold is simply made by using the strip clamp that envelops the cylindrical body, and that is quickly fixed by means of a self-tapping screw.

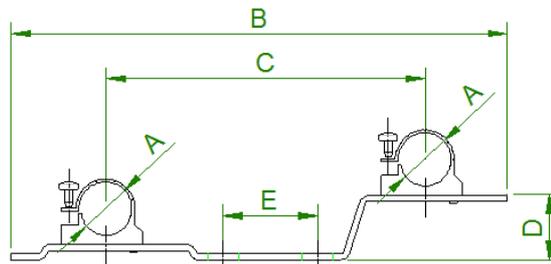

The clamp, made of polypropylene with high temperature resistance, permits to have thermal insulation in the connection and also has the capacity to adsorb vibration during the service.

Technical data

- Suitable for installation of modular manifolds sizes 3/4" and 1"
- Bracket made of carbon steel zinc plated
- Manifold clamp made of PP Copolymer
- Assembly screws made of carbon steel zinc plated included (4 pieces short for manifolds 3/4" size, and 4 pieces long for manifolds 1" size)
- Packaged in pair into recicable plastic bag

Dimensions

Art.	A	B	C	D	E
